

Fiddler: Manual configuration

After installation of Fiddler software next steps should be performed:

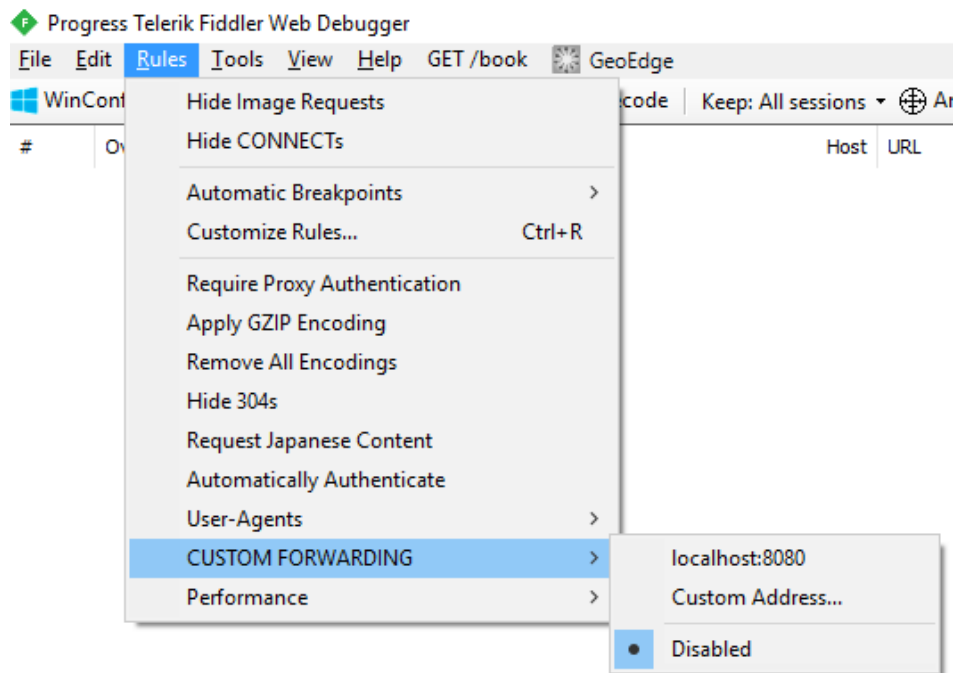

1) Update Fiddler Script.

We can copy `./Configuration files/CustomRules.js` to
`%USERPROFILE%\Documents\Fiddler2\scripts\`

or

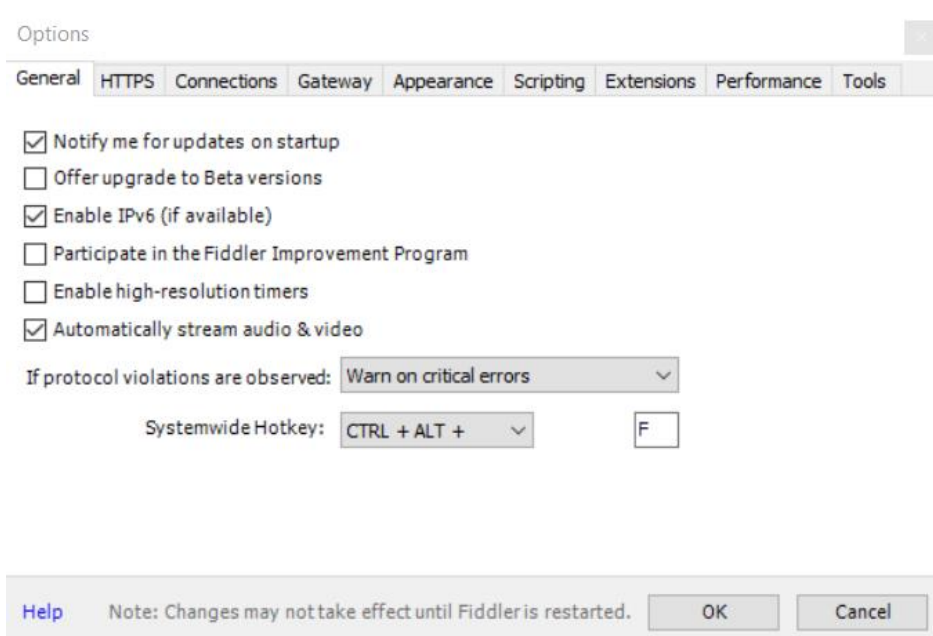

Copy & Paste the content of `./Configuration files/CustomRules.js` to "FiddlerScript" tab at the right and click "Save Script" button

If installed correctly, it will add "CUSTOM FORWARDING" submenu to the Rules menu:

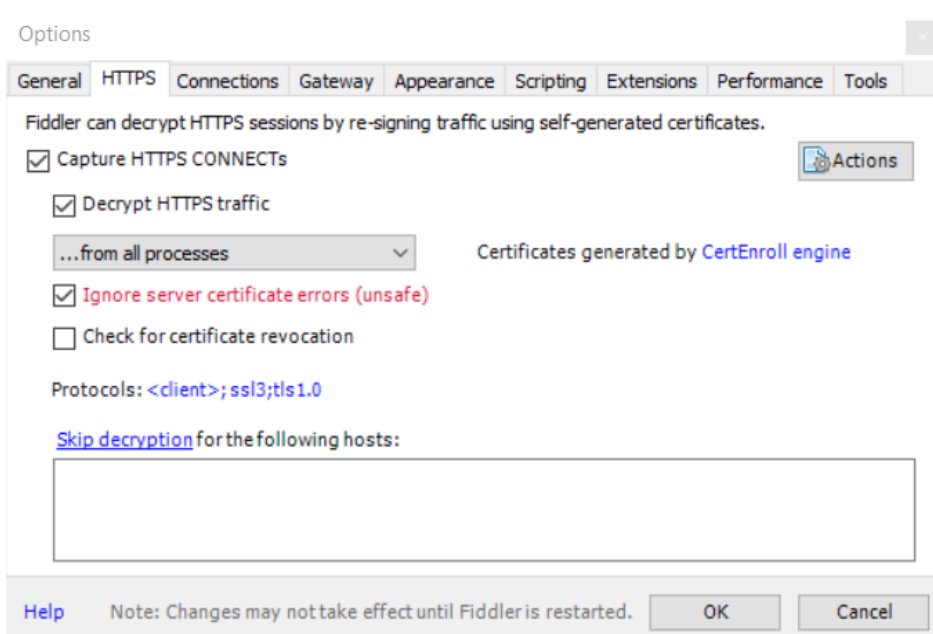

2) Go to “Tools > Options...”

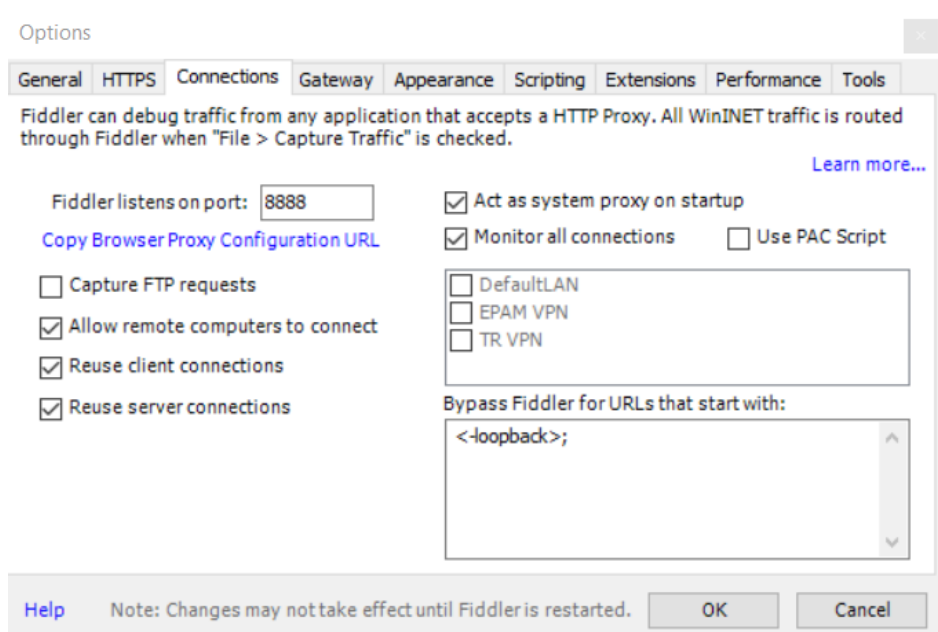

3) Go to "General" tab and make sure, that same boxes are checked, as on the screenshot below:

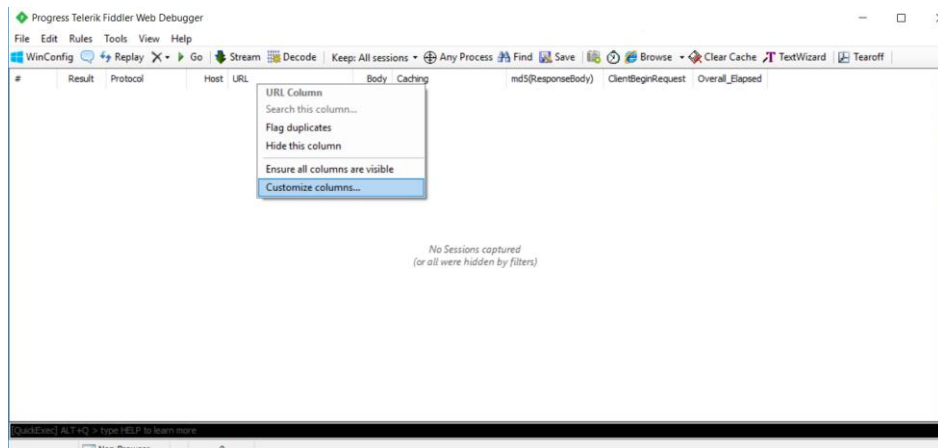

4) Go to "HTTPS" tab and make sure, that same boxes are checked, as on the screenshot below:

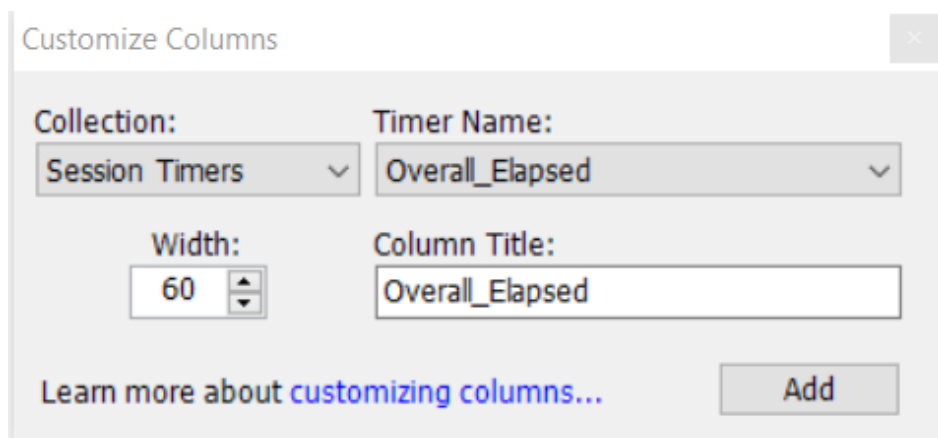

5) Go to "Connections" tab and make sure, that same boxes are checked, as on the screenshot below:

6) Right-click on the columns string and click the "Customize columns" tab:

7) In opened window choose in "Collection" field "Session Timers" option. From "Timer name" field choose "Overall Elapsed". Click "Add":

8) In "Filters" tab click "Actions" button, select "Load Filterset..." and select the following file: ./Configuration files/FiddlerFilters.ffx. This will filter out junk requests from various applications.

***Alternatively, you can just run ./Configuration files/Fiddler2.reg to omit steps 2-8.**
